DETAILED ACTION

- 1. Claims 1-7, 14-16, and 19-22 are pending.
- 2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 02/23/2009 has been entered.

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1-7, 14-16, and 19-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nevarez et al. (US 5781724) in view of Stockwell et al. (US 5950195).

As per claims 1, 5, 14-16, 19, and 21, Nevarez et al. discloses receiving a method of authentication pre-selected by a user for access to the restricted service, wherein the restricted service requires a method of authentication in order to gain access to the restricted service; registering the user-selected method of authentication

Application/Control Number: 10/035,064

Art Unit: 2437

(see column 3 line 32 through column 4 line 8); receiving at least one alternative method of authentication selected by the user from the plurality of methods of authentication for access to the restricted service; registering the at least on alternative method of authentication (see column 4 lines 21-29); wherein the pre-selected method of authentication is displayed to the user as the method of authentication for subsequent attempts to gain access to the restricted service without requiring subsequent reregistration of the pre-selected method, until such time as the user selects such different method of authentication (see column 3 line 32 through column 4 line 29).

Nevarez et al. fails to explicitly disclose causing the user interface to display a selection dialog box corresponding to at least one alternative method of authentication, wherein the input fields and the selection dialog box are presented on the same screen displayed on the user interface and wherein the user is enabled to select the at least one alternative method of authentication from a plurality of methods of authentication for access to the restricted service.

However, Stockwell et al. teaches causing the user interface to display a selection dialog box corresponding to at least one alternative method of authentication, wherein the input fields and the selection dialog box are presented on the same screen displayed on the user interface and wherein the user is enabled to select the at least one alternative method of authentication from a plurality of methods of authentication for access to the restricted service (see column 6 lines 16-27 and column 8 lines 11-13).

Application/Control Number: 10/035,064

Art Unit: 2437

At the time of the invention it would have been obvious to a person of ordinary skill in the art to allow a user of Nevarez et al. to select one of a plurality of authentication methods for access to the restricted service.

Motivation, as recognized by one of ordinary skill in the art, to do so would have been to allow the user to select the suitable authentication scheme.

As per claims 2, 6, 20, and 22, the modified Nevarez et al. and Stockwell et al. system discloses the method of authentication includes at least one of user identification and password; user identification and pass-phrase; smart card and PIN; smart card and digital certificate; biometrics; sound verification; radio frequency and password; infrared and password; and handheld computing device and digital certificate (see Nevarez et al. column 3 line 32 through column 4 line 8 and Stockwell et al. column 6 lines 16-27).

As per claims 3 and 7, the modified Nevarez et al. and Stockwell et al. system discloses enabling the user to select more than one method of authentication for access to the restricted service (see Nevarez et al. column 4 lines 21-29 and Stockwell et al. column 6 lines 16-27).

As per claim 4, the modified Nevarez et al. and Stockwell et al. system the step of registering the user-selected method of authentication as a minimum level of security for authentication for the user (see Nevarez et al. column 3 line 32 through column 4 line 8).

The registered method of authentication is a minimum level of security for authentication because at least the selected method must be performed.

Response to Arguments

 Applicant's arguments with respect to claims 1-7, 14-16 and 19-22 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

 The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Smithies et al. teaches a method of displaying a list of authentication methods for a user to select from.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL PYZOCHA whose telephone number is (571)272-3875. The examiner can normally be reached on Monday-Thursday, 7:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Emmanuel Moise can be reached on (571) 272-3865. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
